

Microsoft devices for Government

Transforming the way public
services are delivered

Reduced budgets, and increasing demand on public services, mean that Government organizations are under pressure to achieve more for less.

Technology is helping to transform the way they engage with citizens and deliver services.

Surface gives civil servants the tools they need to work productively, collaboratively, and securely, wherever they are. With the power of a laptop, the mobility of a tablet, and the convenience of digital note taking, employees can be more efficient, effective, and responsive.

Your office, wherever you go

Light and thin, Surface is truly mobile. It gives civil servants the best elements of a desktop, laptop, and tablet, freeing them from their desks and making it easier for them to work wherever they need to be.

- Collaborate on the move using the full Office Suite with Windows 10 and trusted public service apps.
- Powerful processors and outstanding battery lives make work faster, keeping people connected for longer.
- One device does more. Surface Book 2 has three different configurations: laptop, clipboard, and canvas. Surface Pro converts instantly from tablet to laptop.

Reduce paperwork, increase productivity

Surface and Surface Pen are intuitive to use, making it easy to capture information digitally. Take notes directly onto the screen, and authorize services on location with a digital signature. Surface means fewer forms and less need for transcribing. Errors reduce, admin is easier, and people achieve more.

- Capture photos, videos, text, and audio in the field with the Surface HD camera, Surface Pen, and microphone.
- Video conferencing helps teams to share ideas and make decisions faster.
- Improve collaboration using OneDrive for Business: people can work on the same document at the same time.

Software shown is sold separately.

More efficient and secure

Improving productivity is important, but ensuring data confidentiality is essential. Surface users access internal resources via VPN and Direct Access, which is backed up by the enterprise-grade security of Windows 10. And because people achieve more on one device, Surface is cost-effective too.

- Windows 10 protects against viruses and malware, even if a device is lost or stolen. Surface gives Government organizations the peace of mind that comes with knowing data is safe and compliant.
- Windows Hello facial recognition makes logon easier, and more secure.
- Devices are intuitive to use, and easy to manage, reducing downtime, IT support time, and costs.

“We conducted a comprehensive analysis of other products on the market, and we found that Surface devices met our needs best in terms of performance, application compatibility, multitasking behavior, and user experience.”
